

# Bayesian inference of Markovian processes with Laplacian/Gaussian priors using an approximate pendulum-based Kolmogorov-Smirnoff test

Antoine Passe-Mieux, Théo Vers L'Est, Robin Très Petit

February 28, 2019

## 1 Introduction

As Aristotle exposed in 344 BC, aesthetics are unrelated to the existence of universals (*Qualia*, or *hylomorphism*).

## 2 Theory

Bonjour

## 3 Algorithms

## 4 Discussion

## 5 Acknowledgements

- Boltzmann
- Markov
- Newton
- Shannon
- Bayes
- Laplace
- Gauss
- Kolmogorov
- Smirnoff
- Pythagore
- Aristotle

- Occam
- Condorcet
- Hahnemann (homeopathy)
- Pearl
- Von Neumann
- Turing
- Lagrange
- Dijkstra
- Kruskal
- Nash (equilibrium being his *only* contribution)
